Design Driven

Showcase your creativity with something that's uniquely you.

Frascio is positioned to help designers, architects, and specification writers in a way that very few others in the industry can — by providing a vast selection of designs and elegant finishes combined with robust, commercial-grade construction.

We understand how challenging it is to not only meet the practical demands for hardware in your commercial project, but to also deliver on-point designs and finishes that perfectly complement the project plan.

A bigger box of crayons to play with.

We've assembled one of the largest, most diverse, collections of handle designs and finishes in the world. Choose from over a hundred high-end decorative lever designs engineered using the highest quality materials and crafted with careful attention to detail.

You'll never have to compromise your design to get the performance and durability you need.

900 Stella

Turn your vision into reality.

We understand you want products that are not only beautiful, but will also perform well in high-traffic, high-use environments. Our products combine elegance with strong mechanical engineering and commercial industry experience.

For nearly 80 years, Frascio has provided distinctive Italian lever designs used in some of the most distinguished projects around the world. This heritage of innovative forms and shapes continues through our ongoing collaboration with leading industrial designers as well as our in-house engineers.

View over 100 lever designs in our product catalog at www.FRIInternational.com.

Finish Options

Make your statement with finishes — from traditional standards to something few have seen before.

Frascio provides one of the broadest ranges of standard decorative finishes in the industry, whether electroplated, powder coated, or natural base material finishes from stainless steel, bronze, or brass.

Frascio also proudly offers an industry-leading range of superior finishes and color options through the PVD (Physical Vapor Deposition) process.

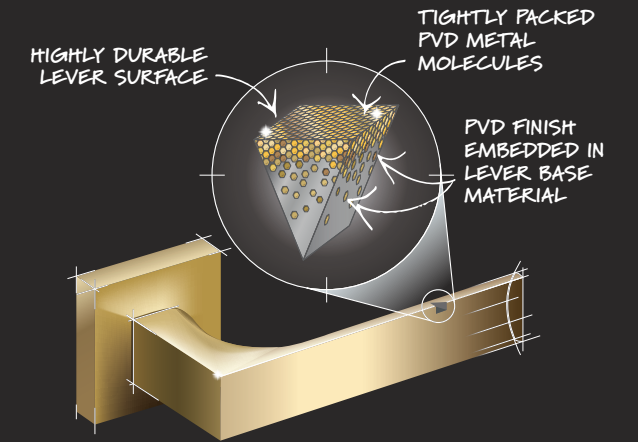

Industry standards that are anything but ordinary.

Frascio offers a wide range of traditional designer finishes and utilizes the BHMA finish code system to designate these standards. BHMA finishes provide resistance to humidity and cleaning chemicals all while standing tough against scratching and high-touch use.

Essential base material finishes are uncoated and are created from stainless steel, brass and bronze. In addition, brass and bronze can be chemically treated to produce patinated finishes in a variety of earth tones.

PVD finishes provide a wide range of elegant colors as well as superior performance.

PVD (Physical Vapor Deposition) is an innovative coating process that scientifically vaporizes exotic metals within a vacuum chamber and deposits them as a protective metal color layer, providing an outstanding range of beautiful color options.

The resulting surface is extremely hard and resistant to abrasion, scratching, and general wear and tear, and is highly resistant to chemicals and humid environments.

Frascio pioneered this process within the door hardware industry 30 years ago and continues to invest in this environmentally friendly manufacturing technology.

Commercial Grade

Your time is precious... and so is your reputation.

We know it's frustrating to carefully select decorative designs and finishes for a project, only to learn later that the hardware wasn't suitable for commercial use or doesn't meet code. You need to know with confidence that your hardware supplier is expertly focused on commercial applications and understands the requirements for performance, durability, and code compliance.

M500 Mortise lock,
745 Modulo L lever

International design with solid American engineering

Frascio takes the guesswork out of the process by specifically focusing on commercial application. Our designs aren't just attractive, we've verified their suitability for hospitality, multi-family residential, and other demanding uses. Our team of engineers and technical staff ensure that all products are designed to perform flawlessly as well as comply with operational standards and codes.

Beauty is more than skin deep! With Frascio's innovative leverset rose mounting systems, the lever style and finish you select can be suited across the project on all locking system platforms.

T600 Standard rose latchset,

T700 Small rose latchset,
640 Kuma lever

Compatibility Perfected

Flexible Adaptation Solutions

Frascio's unique capability allows designers, architects and specifiers alike to maintain a high level of decorative consistency throughout the project all while meeting the most stringent mechanical and security requirements.

Electronic access control

Many Frascio lever designs can be adapted for use with the industry's most popular access control systems to provide a fully-suited design package for your project. Options are available for both sectional rose and escutcheon trim configurations.

Mortise locks and exit devices

Frascio leverset adaptation trim is available for all major ANSI mortise lock brands. Lever adaptations are available for nearly all major exit device brands.

Responsive Creativity

Unlimited Possibilities

Your creativity can take shape in a variety of different forms, ranging from design modifications for our existing products, to all new designs for levers, roses, escutcheons, or pulls.

If you can imagine it, our talented design team can figure out how to engineer and produce it. We use 3D CAD technology to bring your ideas to life.

Are you ready to deliver something remarkable without creative compromise?

If you're looking for something out of the ordinary for your project, getting started has never been easier. You have our commitment to make the process seamless and satisfying. Of all the tasks you and your team have to manage, searching for someone to develop the design solution you need shouldn't be one.

How can we be of assistance?

Frascio offers rapid 3D prototyping to create physical samples for a touch-and-feel review.
